Notice of Updates to ClinicalConnect™

Please be advised of two updates to ClinicalConnect, both effective February 25, 2016:

1. Health Outcomes for Better Information and Care (HOBIC) nursing assessments and their corresponding Transition Synoptic Reports are no longer accessible in the Transcription module of ClinicalConnect. The Ontario Ministry of Health and Long-term Care is decommissioning the HOBIC database at the Institute for Clinical Evaluative Sciences (ICES), and therefore the data integration with HOBIC will no longer be available.

Hamilton Health Sciences, Solution Provider for ClinicalConnect, will continue to look at ways to continue collecting HOBIC measures for portal users, and information will be communicated as it becomes available.

2. A minor update was made to the Expanded View in the Lab module. Now users can view results in the Expanded view for multiple encounters and from multiple facilities, and the Days Back filter has been increased to a maximum of one year.

For more information about ClinicalConnect, please visit <http://info.clinicalconnect.ca>.
