Data for More Patients Now Viewable in ClinicalConnect with Successful Integration of Provincial Client Registry

We are pleased to announce that ClinicalConnect users at authorized organizations now have access to an increased number of patients' records from across Ontario as a result of ClinicalConnect's integration with Ontario Health Digital Services' Provincial Client Registry (PCR).

This integration means that the records of patients who haven't had a visit to a South West Ontario acute care facility or Home & Community Care (HCC) Service will be viewable in ClinicalConnect, including data from provincially-managed repositories.

These users are encouraged to search for a patient's record by their Health Card Number as this is the most efficient method. Access to data for patients who have had an acute care/HCC visit in South West Ontario remains unchanged.

Note that when clinicians are using ClinicalConnect to support their provision of virtual care, records for patients who haven't had an acute care/HCC visit in South West Ontario can now be accessed. Furthermore, COVID-19 results for patients who haven't had an acute care/HCC visit in this region will also be available in the portal's Microbiology module.

For more information about the integration of ClinicalConnect with the PCR, please visit the Simple Search and Advanced Search sections of the Resource Centre.
