Integration of Data from Hospitals Using ESC Region's HIS Now Complete

We are pleased to announce that data from all four hospitals using the new Hospital Information System (HIS) in the Erie St. Clair Region is now viewable in ClinicalConnect.

Windsor Regional Hospital, the final hospital in the current phase to go live with the shared HIS, completed its implementation on April 11, 2021. From a ClinicalConnect user's perspective, this means that data generated by Windsor Regional Hospital, from April 11, 2021 onwards, now displays in ClinicalConnect with "ESC Region" as the "Source". Data from this hospital generated prior to April 11, 2021 is still viewable with "Windsor Regional Hospital" listed as the "Source", and "Metropolitan Campus" and "Ouellette Campus" as its "Facilities".

As this HIS implementation began in September 2020 and has been completed in phases, ClinicalConnect users are reminded that when "ESC Region" is selected as the "Source", data from these hospitals that share the HIS can be viewed: Erie Shores HealthCare, Hotel Dieu Grace Healthcare, Chatham-Kent Health Alliance and Windsor Regional Hospital.

As part of this integration project, the ability to contextually launch ClinicalConnect directly from ESC Region's new HIS is in place, and is being deployed by the hospitals to their ClinicalConnect users.

For a complete list of ClinicalConnect's data integrations, please [click here](#).

Thank you to our partners for their work to integrate data from the new ESC Region hospitals' HIS with ClinicalConnect.
