

## ClinicalConnect Now Integrated with ESC Region's New Hospital Information System

We are pleased to announce that ClinicalConnect is now integrated with the new Hospital Information System (HIS) being used by certain hospitals in the Erie St. Clair (ESC) region. Data generated by hospitals in this new shared HIS is being made available in ClinicalConnect in phases, as follows:

Data generated by Erie Shores HealthCare (formerly Leamington District Memorial Hospital), from September 26, 2020 onwards will now display in ClinicalConnect with "ESC Region" as the "Source". Data from this hospital generated prior to September 26, 2020 is still viewable with Leamington District Memorial Hospital listed as the "Source".

Future phases are planned, beginning in November through until April 2021, to integrate data generated in the new shared HIS by Chatham-Kent Healthcare Alliance, Hotel Dieu Grace Healthcare and Windsor Regional Hospital. A communication will be sent to ClinicalConnect users when data from these hospitals too begins to display with "ESC Region" as the Source.

In addition, as part of this integration project, the ability to contextually launch ClinicalConnect directly from ESC Region's new HIS, has been configured and will be deployed by the hospitals to their ClinicalConnect users.

For a complete list of ClinicalConnect's data integrations, please [click here](#).

Thank you to our partners for their work to integrate ClinicalConnect with this new HIS implementation in ESC region.
