Viewing Cardiology Data From St. Mary's General and Grand River Hospitals in ClinicalConnect's Cardiology Module

We are pleased to announce that select types of cardiology-related data from St. Mary's General Hospital and Grand River Hospital now appears in ClinicalConnect's Cardiology module, moved from its previous location in the Transcription module. The data now viewable from these hospitals in the Cardiology module includes the following, and the "Source" of this data is "WW HUB":

- Holter Monitoring
- Cardiac Stress Test
- Cardiac Tilt Table Test
- Electrocardiograms

Through previous integration work, cardiology-related data from various acute care sites is already accessible in the Cardiology module, with this data from remaining hospitals in Ontario Health West Region, as well as from the provincial [Diagnostic Imaging Common Service](#) (data repository), viewable in either the Radiology and/or Transcription modules. ClinicalConnect's [Data Integrations Chart](#) provides a high-level summary of the data available in each clinical module.

For more information on ClinicalConnect, visit <https://info.clinicalconnect.ca>, or contact:
Kate Black, Service Delivery & Communications Manager, blackka@hhsc.ca

ClinicalConnect is a secure, web-based portal that gives authorized healthcare providers real-time access to their patients' electronic medical information. It is operated by Hamilton Health Sciences and funded by Ontario Health.
